DETAILED ACTION

Response to Arguments

Applicant's arguments, see Remarks, filed 12/11/2006, with respect to the rejection(s) of claim(s) 1-24 under 103 (a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of the references cited below.

Claim Objections

Claim 24 is objected to because of the following informalities: There is a typo on line 1 of claim 24. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Kamen (5,983,136). Kamen discloses a method for transporting a pharmaceutical agent through human skin comprising the steps of ablating said membrane with a shear device (10) comprising a sheet (12) containing at least one opening and a shear member (60), where said sheet is contacted with said membrane such that a portion of said membrane is forced through said opening and ablates said portion of said membrane exposed through said opening, and utilizing a driving force to move said

Art Unit: 3763

molecule through said perforated membrane, wherein said shear member is a shear blade, wherein said portion of said membrane is forced into said opening by a pressure force, wherein said pressure force is mechanical pressure, wherein said pressure force is suction, wherein said shear device further comprises a driving unit to move said blade, wherein said driving unit is powered manually by the user of the device, wherein said driving unit is powered by an electric motor, wherein said driving force is a pressure gradient, wherein said device further comprises a sensor for modifying the drive unit, wherein said shear blade moves parallel to said shear sheet.
